

Pressure Washing Chemicals and M.S.D.S. Sheets

Professional pressure washer contract cleaners typically use several different Pressure Washing Chemicals in the course of their work week. If a dangerous exposure to any of these chemicals is experienced prompt medical attention becomes a necessity. But what good is prompt medical attention if the attending physician is not absolutely sure what the chemical exposure consists of?

Not all professionals using Pressure Washing Chemicals truly understand the importance of carrying M.S.D.S. (Material Data Safety Sheets) in an absolutely safe, protected and accessible place in their company vehicles when traveling and while on the jobsite.

Carrying these M.S.D.S. sheets is mandatory when working with and transporting chemicals. If the department of transportation stops you for a traffic infraction or routine inspection and M.S.D.S. sheets cannot be produced, your vehicle can be impounded and substantial fines can be levied.

In an emergency situation any delay in supplying the health care provider with this information could be the difference between a routine treatment or serious complications, even death.

So as you can see it is all about your safety and the safety of others.

Keeping all your M.S.D.S. sheets in one binder and in plastic sheet protectors to guard them from the elements is a responsible action, also make sure this binder always accompanies your employees to the job site, what good is it sitting on your desk in the office or in your vehicle? And be sure to train all your employees in the procedures you want followed in the event of an accidental exposure.

This is much like life insurance as "it is better to have it and not need it than to need it and not have it."

When you truly understand the risks and rewards of being in business you quickly learn why working safe is working smart in more ways than one.

As a last note: If your chemical supplier doesn't supply M.S.D.S. sheets find another supplier quick!
